

PXP

Some Think It's the Health Discovery of a Lifetime

"I've been waiting for 30 years for this product! It's literally transforming the health of many people I know and I have over 50 Doctors trying it! I really think this product could change the world. I've never seen anything like it!"

Dan Clark, M.D.

Those are the words of Dr. Dan Clark, a renowned holistic Medical Doctor in the United States. Dr. Clark and dozens of other Doctors have recently come across a health breakthrough of enormous potential. The article below will give you more details on this marvelous product. I encourage you to take a few minutes and read this carefully. For many people around the world, this could be the health discovery of a lifetime. If you or someone you know are struggling with a health problem of any kind, review this carefully. It's improving many serious health conditions for thousands of people, when no other health product worked.

The Power of PXP

Many Doctors and researchers around the world are astonished at the transformational benefits of a remarkable new health product called PXP. If you haven't heard of PXP yet, pay close attention. It's improving many health conditions that would normally be considered medical impossibilities.

Over the past couple of months I've interviewed a number of people about their experience with PXP. I interviewed a distinguished Harvard educated Medical Doctor, a Naturopathic Doctor, a Chiropractor, a researcher and a layperson or two who were very enthusiastic about PXP. The more people I interviewed the more intrigued I became at how much this product is changing lives.

PXP is relatively new to the United States so you're learning of it very early. However, it's been developed by some brilliant researchers and scientists over the past 17 years. So what is it about this unique health compound called PXP that makes so many people in this country feel like they've been given "their life back?"

How does this one product (PXP) get such dramatic results in transforming so many long-term health conditions?

PXP is a special polysaccharide polypeptide formula grown and manufactured in a most unusual way. There are several very important steps to the process of creating PXP. In the development of PXP, select **RARE varieties of rice** are harvested from the fertile Siam Valley in Thailand, known as the "rice bowl". Select strains are harvested at a specific age to ensure optimal nutrient value. Selected fractions of rice are used in a proprietary process that uses no enzymes or acids. The grains produce potent polysaccharide peptides that possess unique functional characteristics easily recognized by DNA, RNA and genes. Furthermore, Enzacta (the developer of PXP) uses Scanning Electron Microscopy technology for superior quality control.

PXP is composed of a SUPER BREED of rice. This is rice, as we've never known it before. *In Thailand they've got original rice seeds dating back 1000 years.* Enzacta has the world's top rice DNA geneticist working with them to create even more powerful strains of PXP. The scientists created PXP by choosing from 3,000 strains of rice to find the ones with ideal proteins and healing sugars. Out of those 3,000 strains, they found 3 very special strains that were super rich in these polysaccharide peptides. In turn, the starch and waste were removed

from the rice to get just the nutritional “**sweet spot**”. Furthermore, it takes 100 pounds of rice to create just one pound of PXP. These special strains of rice are cross-pollinated (not genetically modified in any way) to create a nutritional profile that is having a dramatic effect upon many serious health conditions.

But there’s much more to the creation of PXP...

PXP is a very effective product because in the extraction process the polysaccharide peptides are bonded together under controlled temperatures, humidity and pressure. One of the secrets to the healing powers of PXP is the size of the grain. PXP is milled in a specially built multi million dollar-milling machine owned by Enzacta. **It is one of the most advanced milling machines ever built.** Using this nanotechnology milling process PXP is milled down to a millionth of a unit. When the rice is milled a naturally hydrolyzed alfa glycan is formed. This unique technology utilizes a special process that weakens the PXP molecular bond so that when it is taken internally the PXP is highly available for absorption by the individual cells.

Once inside the cells the PXP will increase the energy level of the cells by increasing the ATP energy production of the cells mitochondria and provide protein for the production of new cells. PXP is called a bio-available nutrient because **almost one hundred percent of the PXP taken internally is absorbed by the cells.** This bio-available nutrient is critical for DNA repair and provides the cells with other important nutrients such as vitamins, minerals and antioxidants.

Because of this special milling process, the utilization and absorption of PXP is not dependant, in any way, on the user’s ability or inability to digest it. Research shows, once it’s digested, close to 100% of PXP is delivered right to the Mitochondria (powerplant) of the cell. Part of the “magic” of PXP is it’s ability to essentially create an abundance of ATP, the life blood of every cell. In essence, PXP helps the Mitochondria create ATP. ATP does the rest to initiate the healing process, energize and regenerate the human body!

The Life-Giving Properties of PXP

The specific properties and combinations of these organic minerals, antioxidants, polypeptides/amino acid compounds and polysaccharides in PXP have the ability to dynamically stimulate the body into a natural state of homeostasis (where the body is in balance) therefore blood sugars, cholesterol, triglycerides, blood pressure, electrolytes and Ph become balanced and the natural healing begins. Furthermore, the special polysaccharides found in PXP have a powerful effect upon improving cell-to-cell communication – which can dramatically affect and improve many chronic health conditions.

Each PXP molecule contains a complete amino acid profile, complex carbohydrates, cofactors, vitamins and minerals – everything your cells need to create energy and restore health. PXP is in the form of a powder that mixes relatively quickly in liquid making it completely bio-available.

Enzacta and their scientific team have designed what many Doctors and laypeople believe is currently the greatest human body fuel on this earth. *PXP is a highly innovative formula*, designed to profoundly energize the trillions of cells within the body. Because of the depth of this formula, PXP is improving many serious health conditions that no other product can touch.

Besides the effect PXP is having upon many long term health problems, **PXP is also capable of profoundly raising the base level of energy and vitality** for the many millions of people who are struggling everyday with fatigue. With PXP, an abundance of new, youthful energy is only a few scoops away.

Testimonial from a 71 year old man in a lot of pain and feeling old...

“It absolutely totally gave me my life back. Before PXP came into my life, I was at the point that I didn’t care whether the sun came up the next morning. My friend sent me a bottle of PXP with a note that said, ‘give this to the sickest person you know’. PXP changed my life dramatically in 3 days.”

Unique Points to Note About PXP:

Because of the profound results many Doctors are getting with PXP, 40 Doctors in Jordan are making PXP available as a prescription for their patients. It's that powerful!

Doctors in at least one hospital in the Philippines are using PXP with many of its patients and documenting its effects upon chronic health conditions. The results are mind-boggling.

The top rice DNA geneticist in the world is working with Enzacta to develop the next generation of PXP...and the next generation...and the next generation.

The 2.5 million dollar milling machine owned by Enzacta is milling the PXP grain down to a millionth of a unit. This is the secret to near 100% absorption and utilization, regardless of how poorly the user's digestive system is functioning.

Enzacta has genetic engineers studying and cross breeding certain strains of rice, in an effort to create a specific nutritional profile to target certain health conditions. They're always experimenting, creating new strains—the next SUPER BREED of rice for PXP. Through this cross-pollination process, the strain is much stronger—a lot more powerful. It's important to state here that NO GMO is used in the making of PXP!

PXP is getting profound results with many long-term health conditions that might normally be considered medical impossibilities.

Many Doctors in the U.S. have now been exposed to PXP and are highly impressed with the results. In time we expect to have thousands of Doctors in the U.S. alone making PXP available to their patients.
